

Description

The XM-4007C-4 photoluminescent reflective segmented tape is made from 100% Polyester and has been certified to meet stringent safety standards, including EN 20471, ISO 17398. This cutting-edge tape is designed to provide exceptional visibility in low-light conditions and ensure the safety of workers in various industries. XM-4007C-4 ensures that workers remain easily seen even when light sources are limited or absent.

Product Construction

The construction of photoluminescent tape XM-4007C-4 involves incorporating special dyes that have photoluminescent properties. These dyes absorb and store energy from ambient light. Once the light source is removed, the stored energy is released in the form of a vibrant glow. At the same time the luminous backing have silver stripes with numerous glass micro-lenses impregnated with a special glue into this layer. The light reflects from these micro-lenses and comes back to a car (or other source of light) making the person wearing reflective tape more visual in the twilight.
