

REFLECTIVE TAPES
FOR HI-VIZ CLOTHING

FLAME RESISTANT

XM-8010

- HEAT TRANSFER
- REFLECTIVE TAPE

| | |
|----------------------------|---|
| Article | XM-8010 Corsica HT |
| Properties | Heat transfer |
| Application | Flame Retardant clothing for industrial workers |
| Composition | 100% FR PU+Polyester |
| Colour | Yellow-Silver FR-Trim |
| Reflectivity | RA>490 (Glass beads) |
| Roll size | 5cm x 100m |
| Certification | EN 20471, EN 469 |
| Washing performance | 35x wash at 60°C |

Reflective tape (film) XM-8010 Yellow-Silver is Flame Resistant and certified to EN 469. This heat applied reflective tape (film) is for thermo transfer application on FR-workwear and Firefighters clothing.

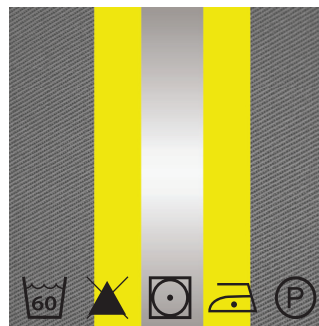

EN 20471

Initial retroreflective performance value, Ra=490. After 35 washes at 60°C, the tape has met the requirements of Flammability test (ISO 15025, Edge ignition) and Retro-reflectivity test (Ra=448). Thus, this reflective material is certified to EN 469 & EN 20471 after 35 wash cycles.

EN 469

It is planned to further develop durability of XM-8010 to pass EN 469 & EN 20471 requirements after 50 wash cycles at 60°C. Reflective tapes (films) of 8000-serie are high-tech material, that is why we urge you to apply the tape on a sample cloth before the first use. It is also useful to make trial washes of the cloth with applied tape.

! Please test the temperature, application time and pressure on a sample fabric before heat transfer to a fabric or garment. Due to the different composition of each fabric, XM reflective tape (film) would need a little adjustment in application temperature, pressure and time.
